

SOFTWARE ENGINEERING

Class 2, Course Overview and Introduction

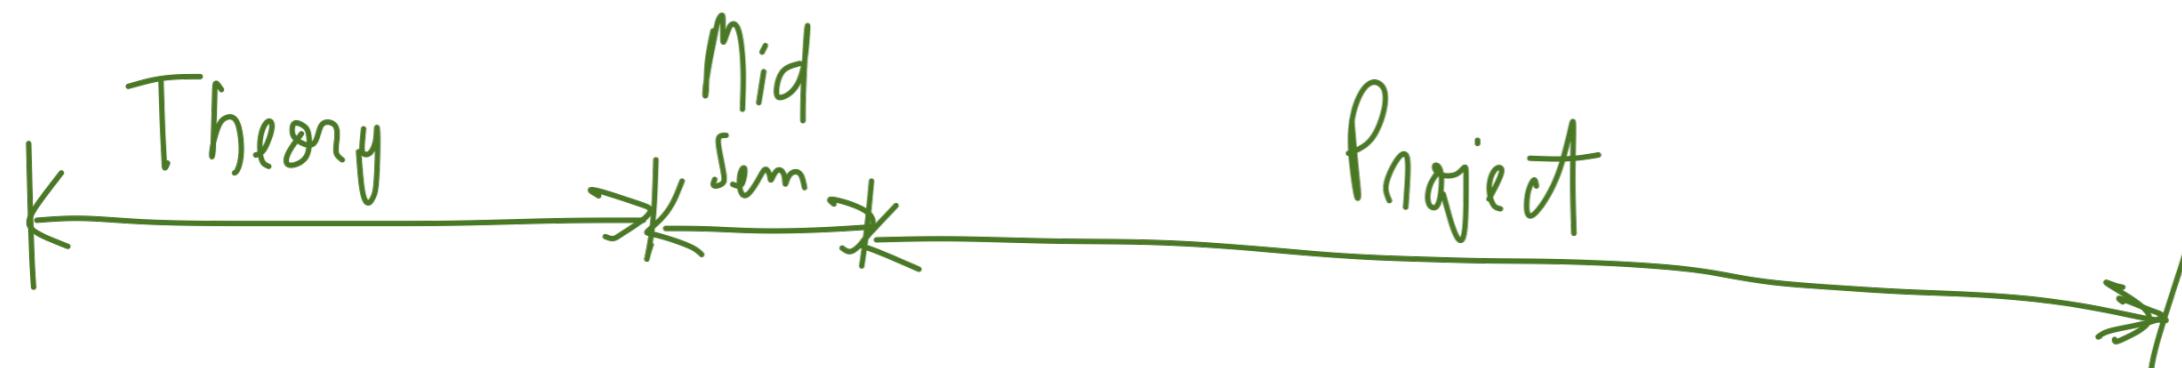

TOPICS

- Course Overview.
- Foundation.
- Reference materials.

COURSE OVERVIEW

GOAL

Learn software engineering concepts by building a highly scalable application deployed to the cloud.

12-14 classes

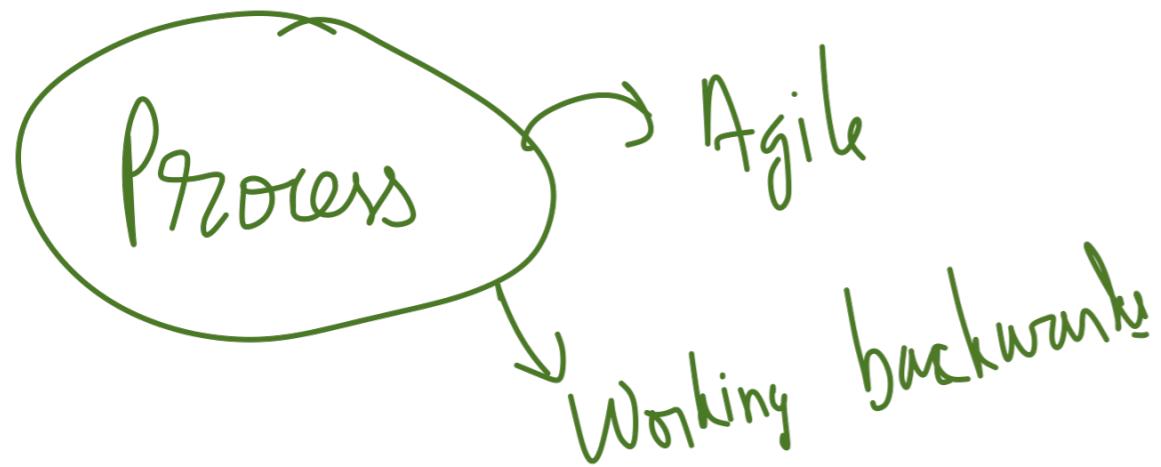

(Software Engineering
Basics)

12 - 14 classes

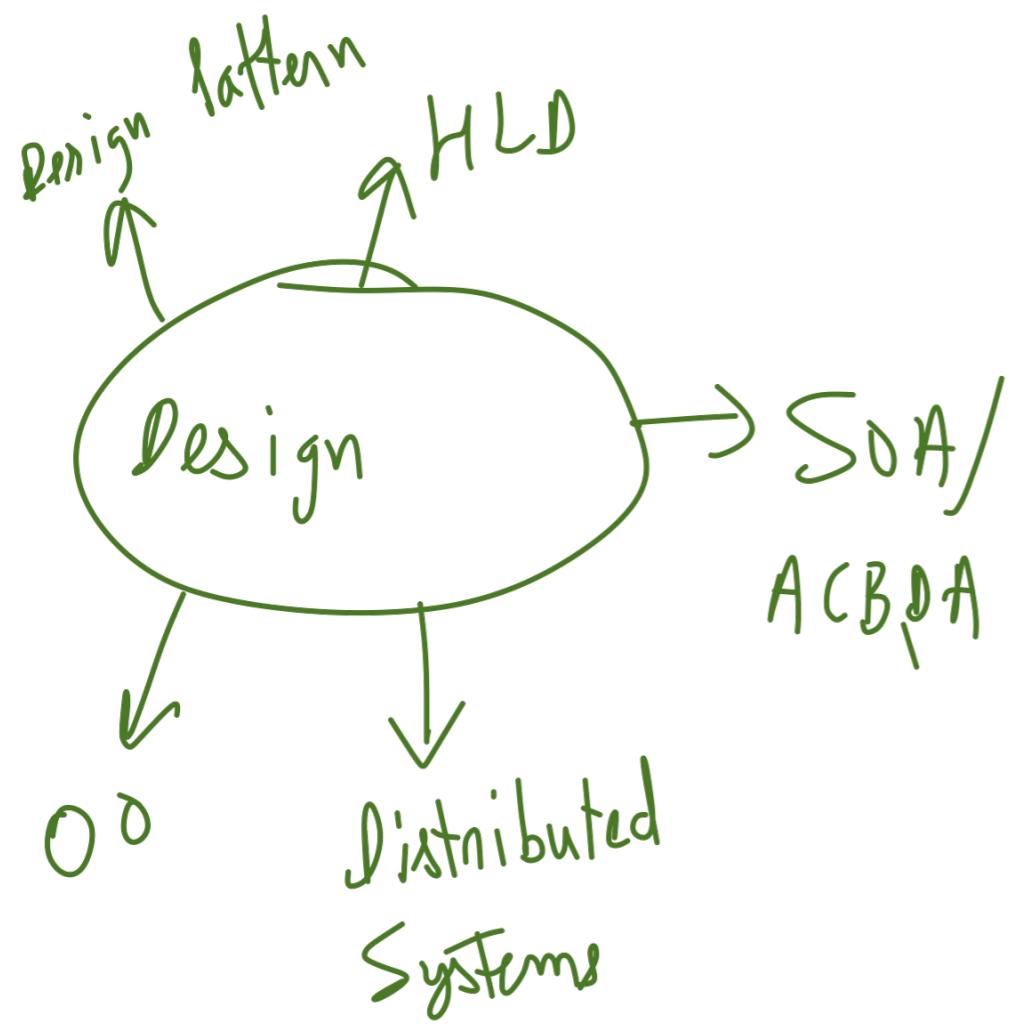

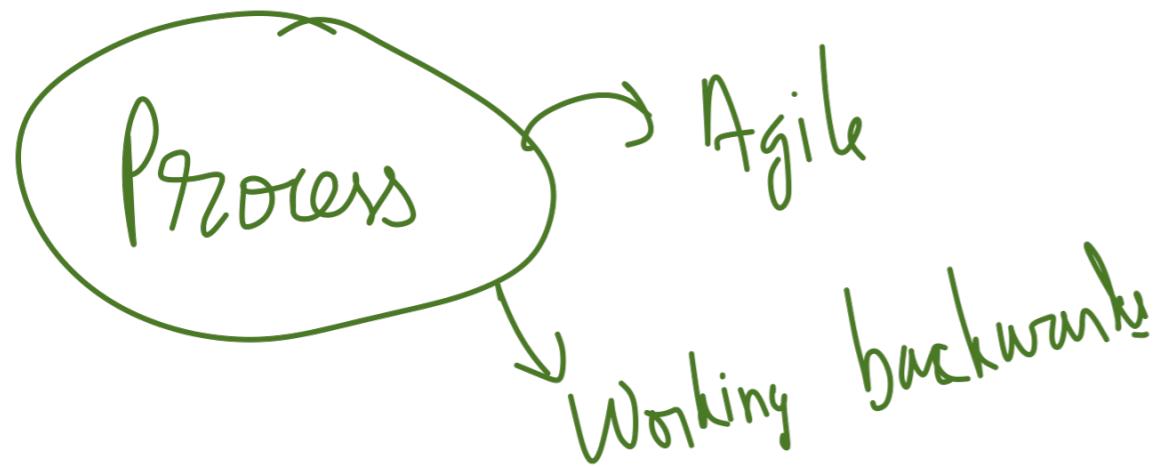

(Reviews , Demo)
& Guest lecture

2-4
Optional
classes
for
learning
Java/
Cloud System

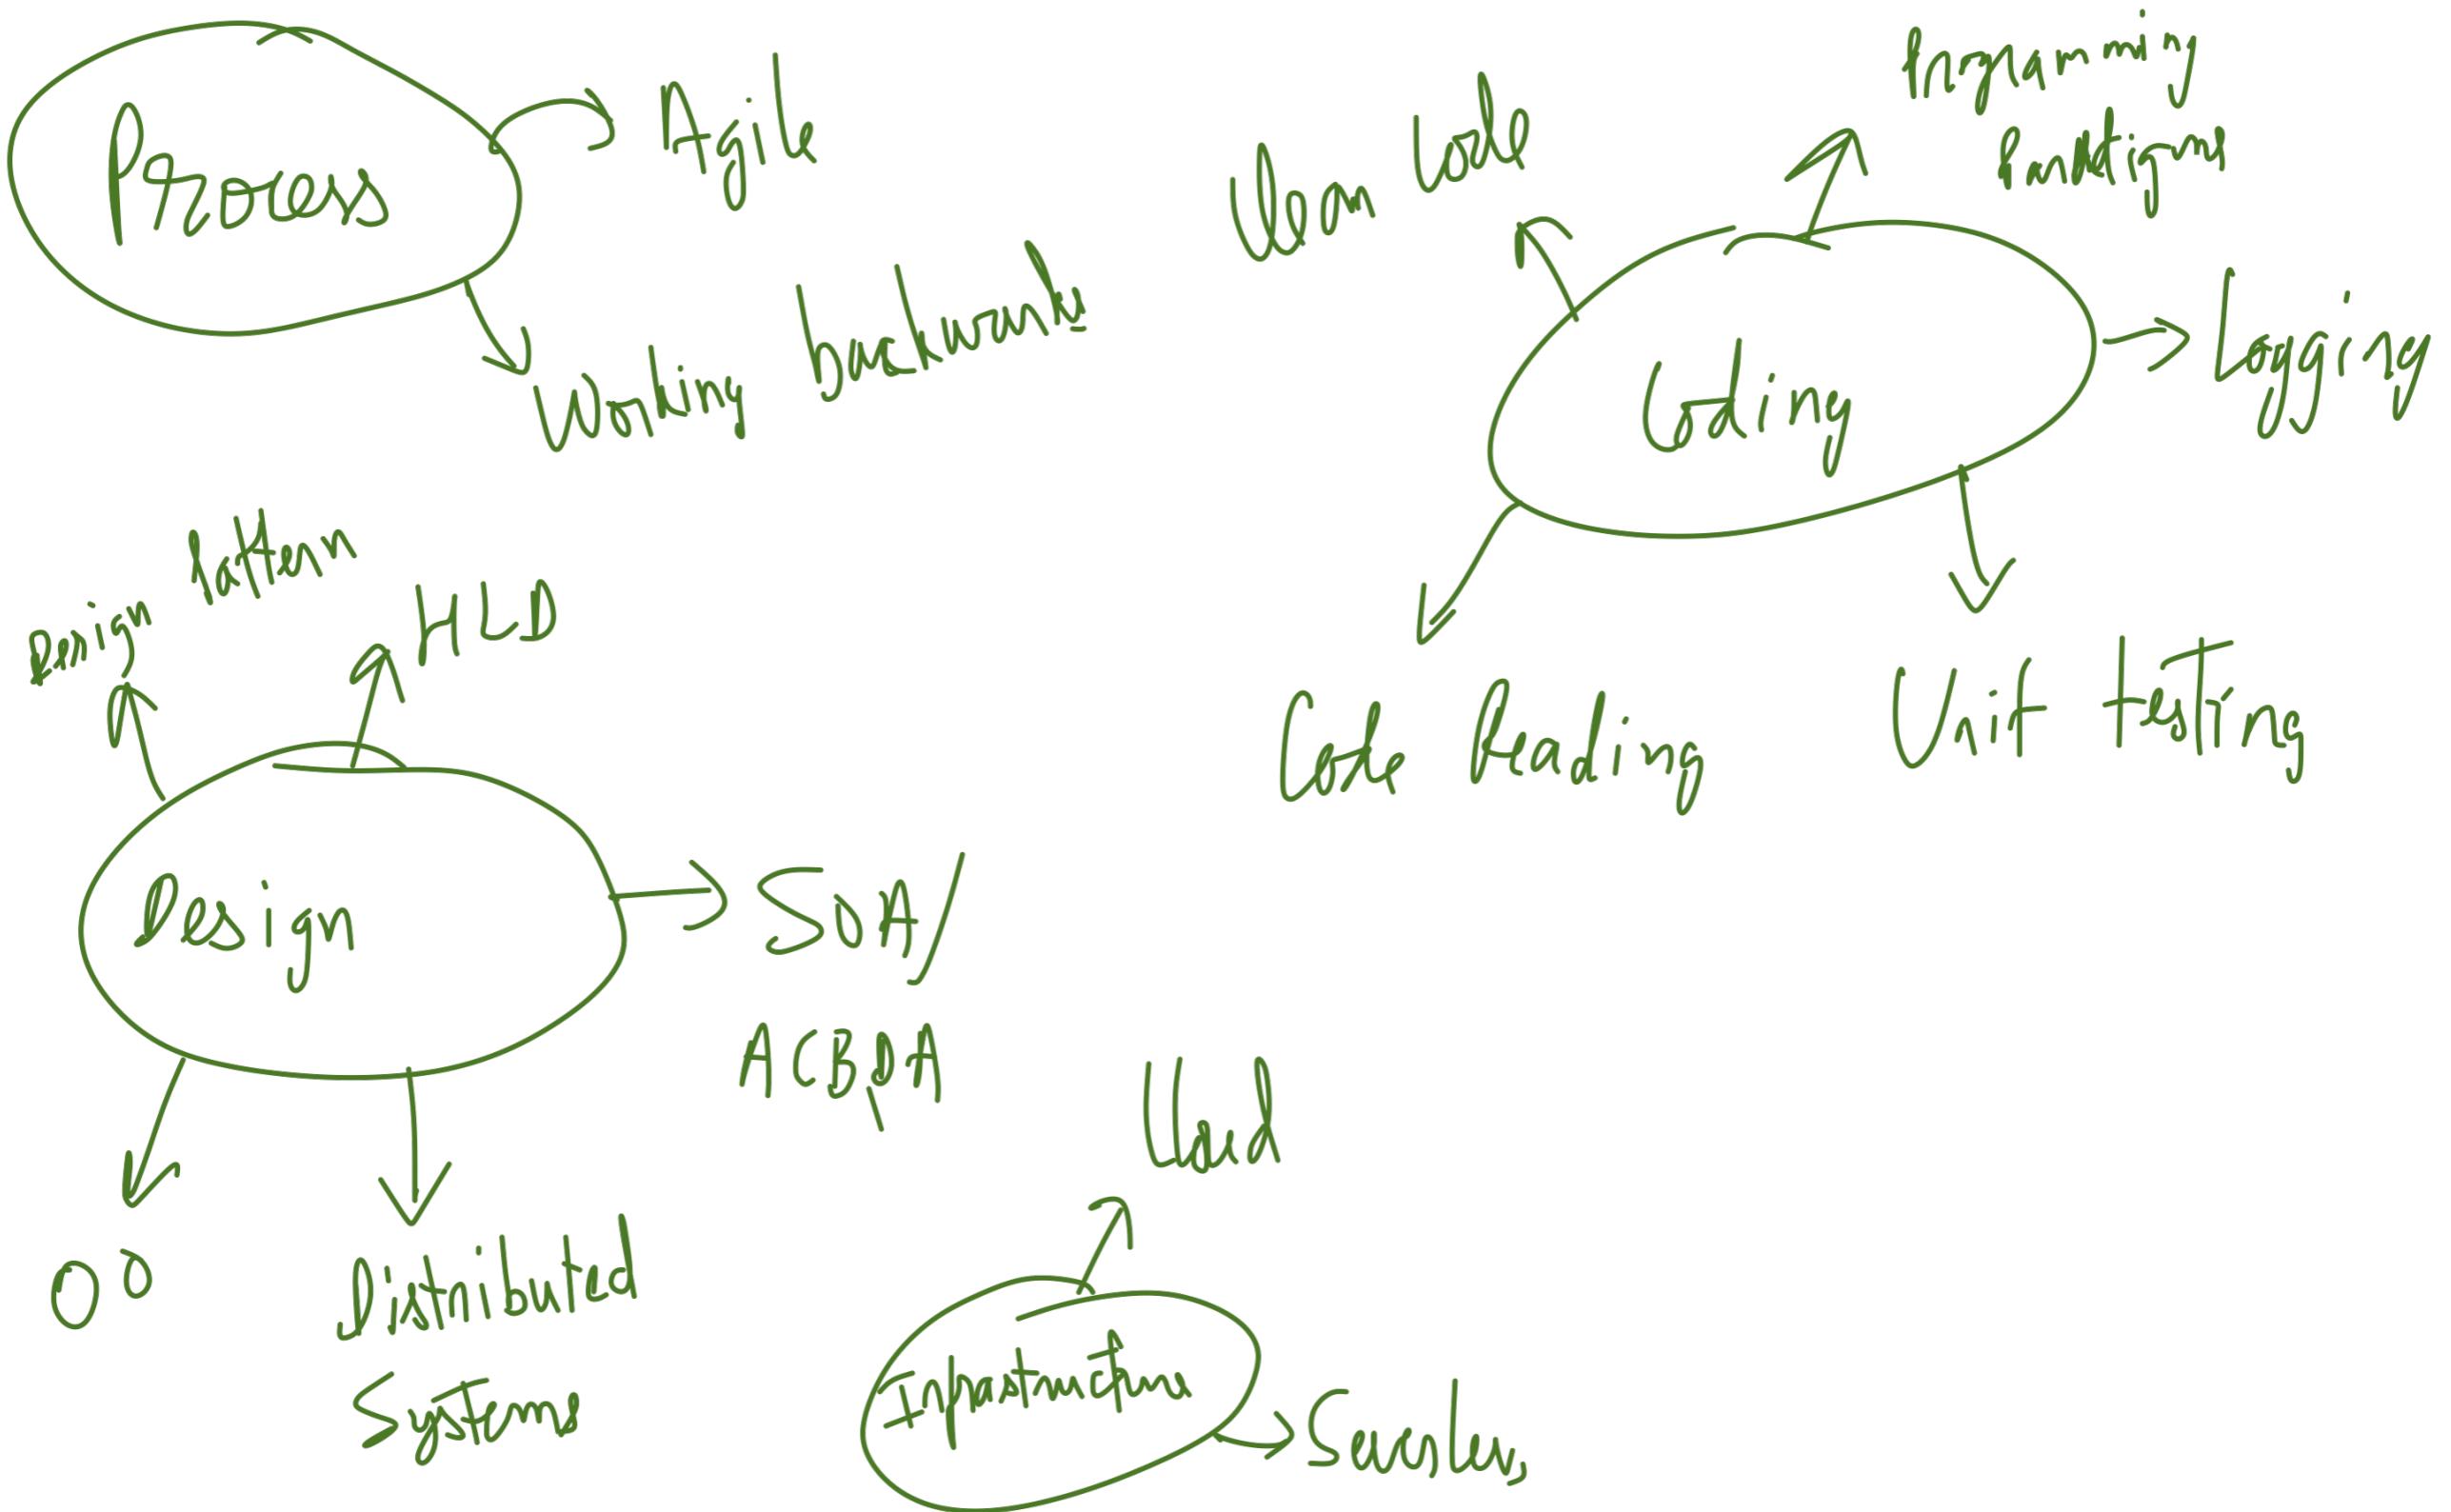

THEORY

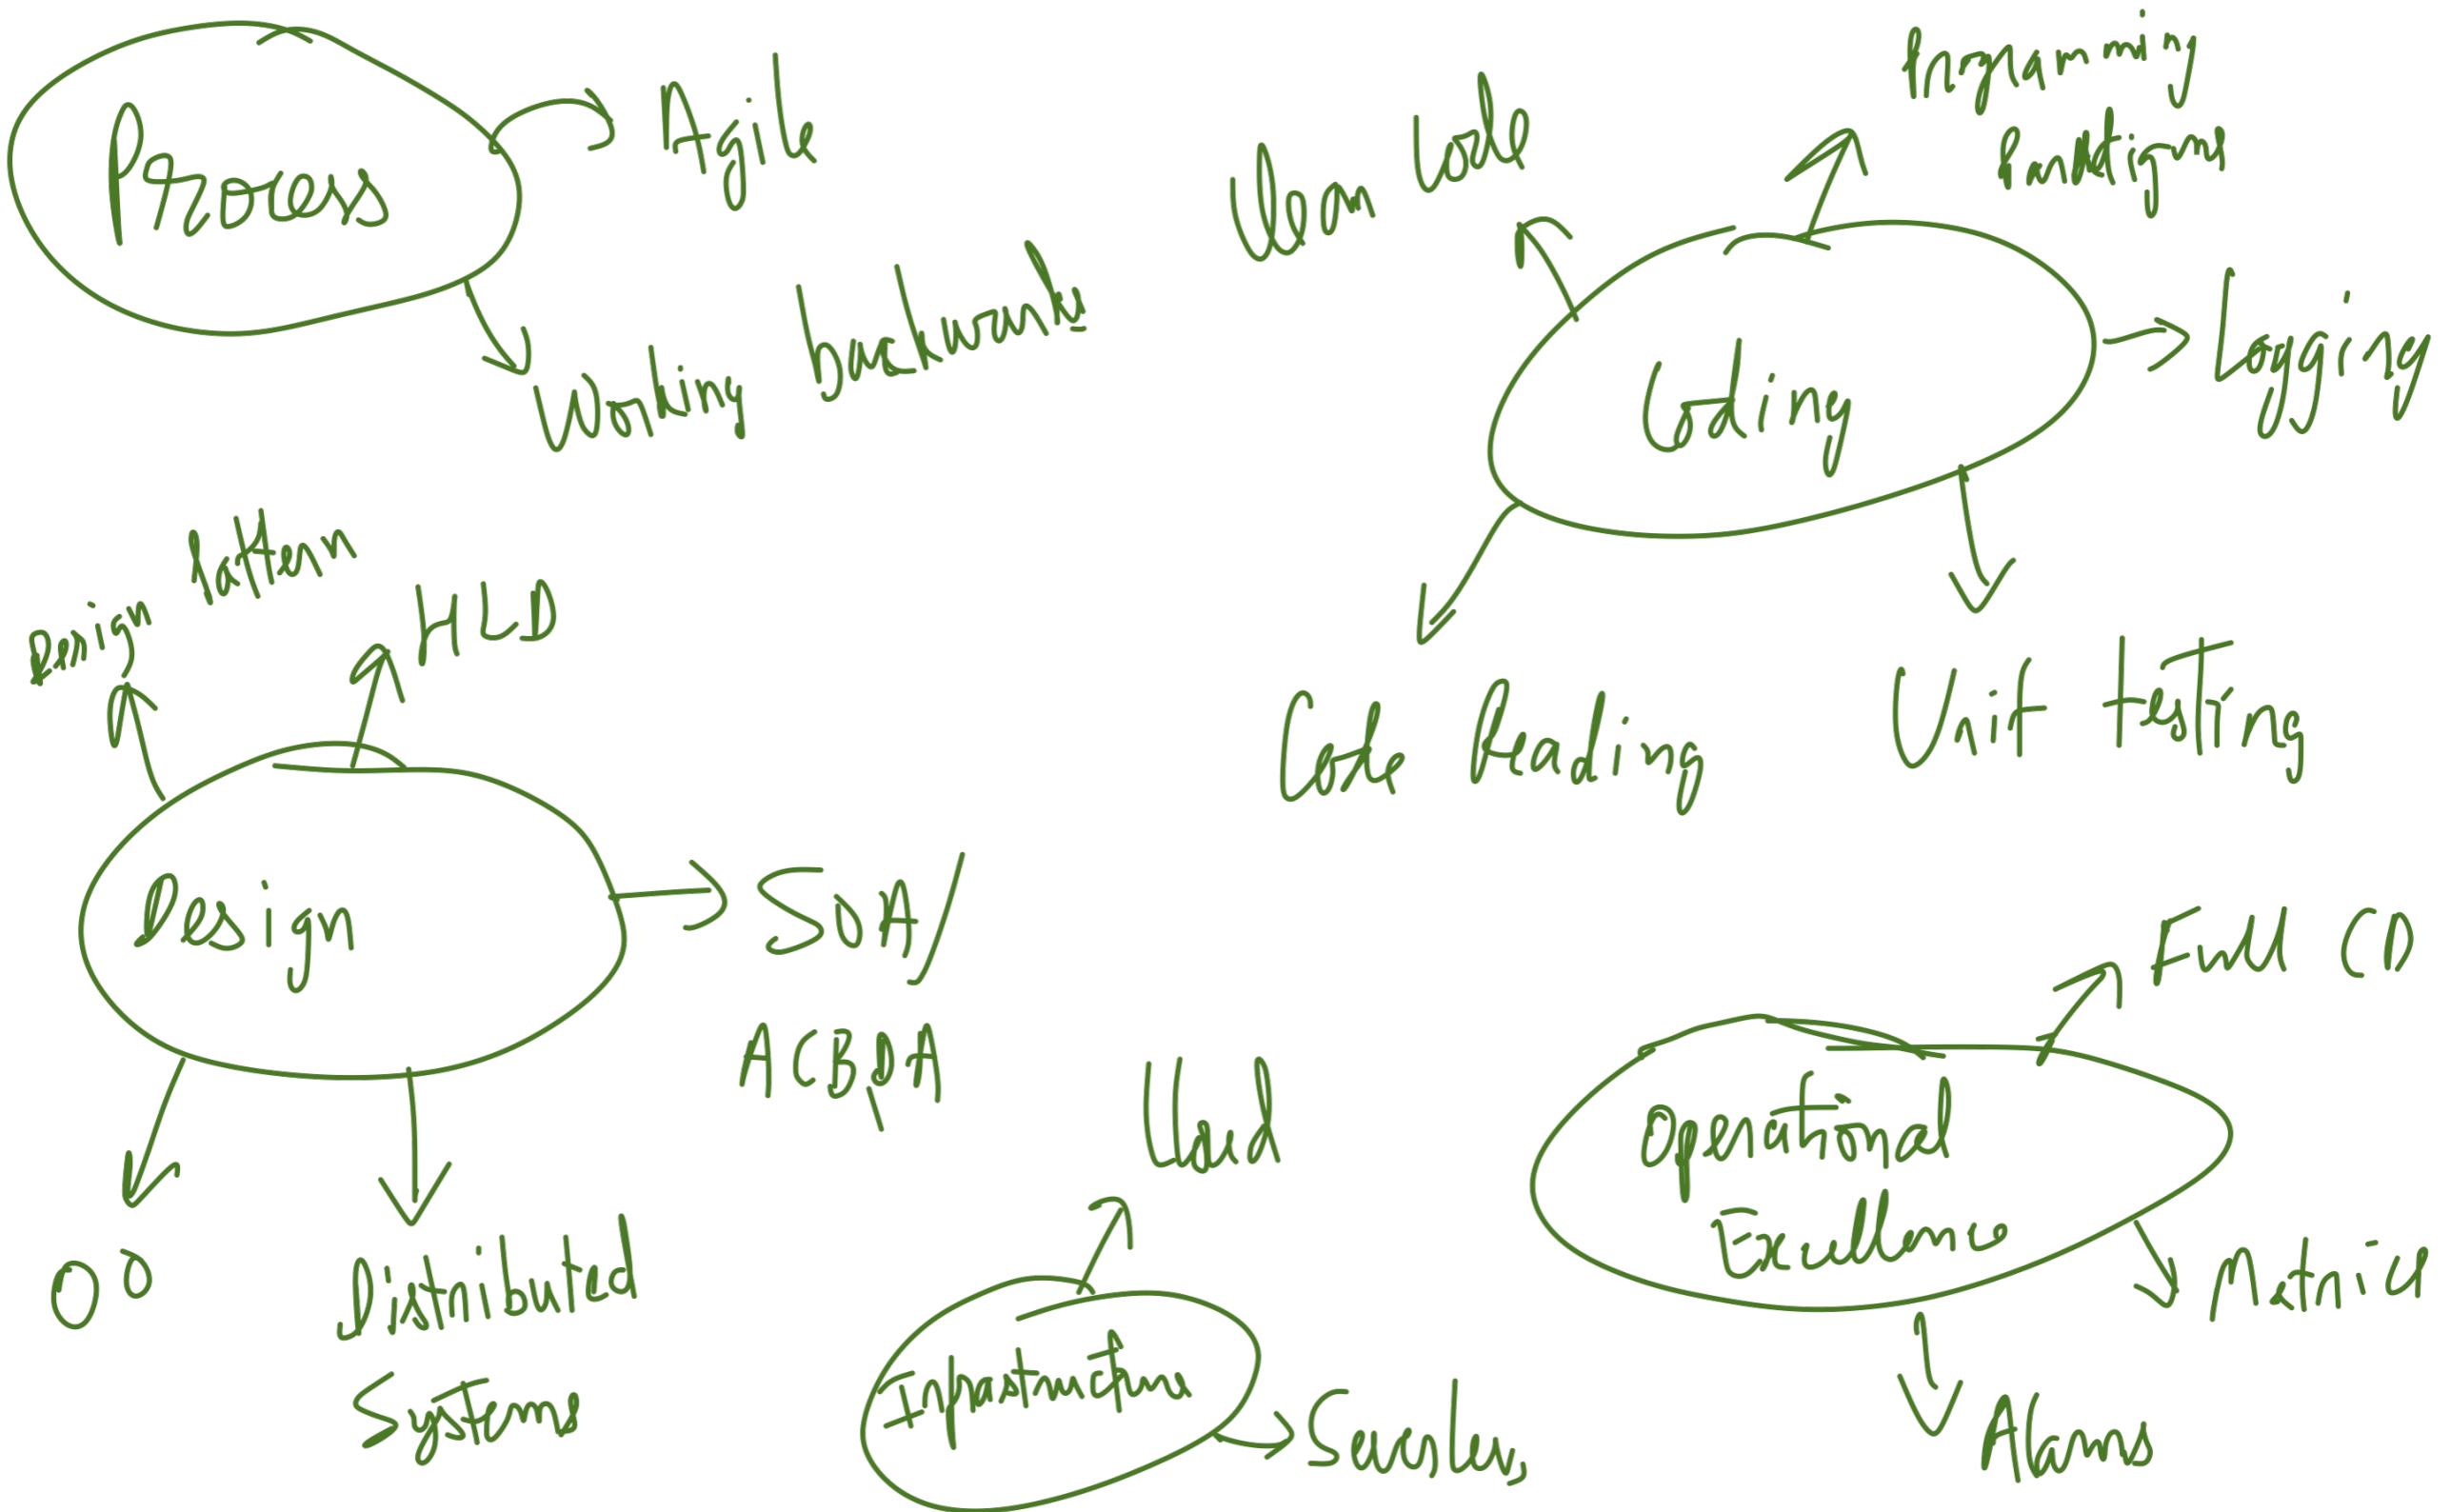

THEORY

THEORY

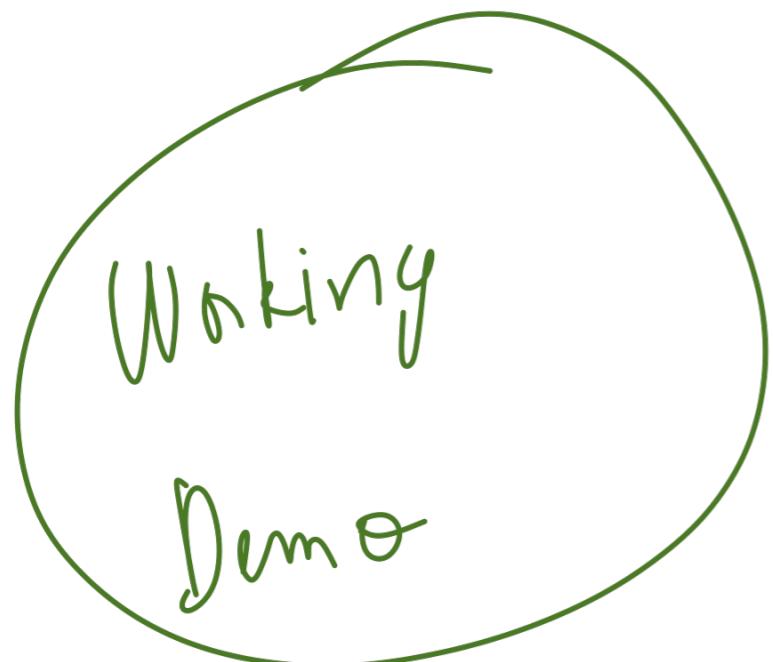

THEORY

PROJECT

[Team Size : 2 - 6]

Type of Evaluation	Weightage (in %)
Mid SemExam	20%
PRFAQ Review (In Class)	10%
Design Review (In Class)	10%
Final Project Demo (In Class)	40%
Class interaction/Quiz	20%

No text book / All reference materials available online

FOUNDATION

**LEARNING.
EXPLORATION.
DISCOVERY.**

“

“the application of a systematic, disciplined, quantifiable approach to the development, operation, and maintenance of software; that is, the application of engineering to software.”

“

“the application of a systematic,
disciplined, quantifiable approach to the
development, operation, and maintenance
of software; that is, the application of
engineering to software.”

engineering

/ɛn'dʒɪ'njərɪŋ/ 

noun

1. the branch of science and technology concerned with the design, building, and use of engines, machines, and structures.
2. the action of working artfully to bring something about.
"if not for his shrewd engineering, the election would have been lost"

Translations, word origin, and more definitions

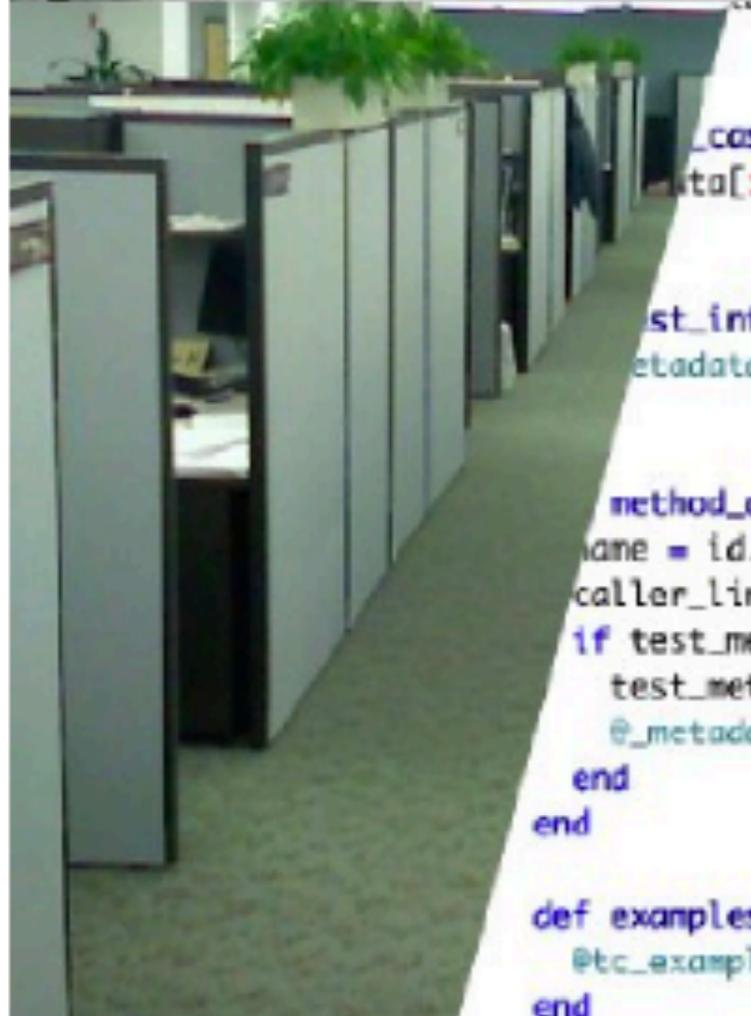

ENGINEERING

- Requirements
- Design
- Construction
- Testing
- Maintenance

“

The conversion of an idea to an artefact, which engages both the designer and the maker, is a complex and subtle process that will always be far closer to art than science.

-Eugene S. Ferguson,
Engineering and the Mind's eye

SOFTWARE ENGINEERING

- Requirements
- Design
- Construction
- Testing
- Maintenance

“

Walking on water and developing
software from a specification are easy
if both are frozen

-Edward V Berard

“

Perfection (in design) is achieved not when there is nothing more to add, but rather when there is nothing more to take away

-Antoine de Saint-Exupery

“

Let us change our traditional attitude
to the construction of programs.
Instead of imagining that our main
task is to instruct a computer what to
do, let us concentrate rather on
explaining to human beings what we
want a computer to do.

-Donald Knuth

“

Program testing can be used to show
the presence of bugs, but never to
show their absence!

-Edsger Dijkstra

“The fundamental problem with program maintenance is that fixing a defect has a substantial (20-50 percent) chance of introducing another. So the whole process is two steps forward and one step back..

-Fred Brooks
